

# CYCLOWTEX

**The environmentally friendly  
alternative to PVC.**

**Lows of Dundee are proud to launch our new product, CYCLOWTEX, the first product launched under the RECYCLOW name**

**CYCLOWTEX** is a newly designed fabric which can offer a sustainable alternative to PVC.

**CYCLOWTEX** is an Olefin based product which does not derive from chlorine, nor does it require the addition of chemicals like plasticisers to make it flexible, thus reducing the environmental impact in comparison.

**CYCLOWTEX** has a better strength to weight ratio than PVC products. Our 350gsm **CYCLOWTEX350** product has similar mechanical properties to our 560gsm PVC.

**CYCLOWTEX** is a fully recyclable product, so a real "end of life solution" can be offered, be this for your off-cuts from your production, or the

product you have supplied to your customer.

**CYCLOWTEX** can be welded using hot air and hot wedge machines. It is also easily sewn together to produce your products.

**CYCLOWTEX350** can be used for general covers and tarpaulins, including agricultural and industrial covers, trailer and boat covers as well as many other applications.

**CYCLOWTEX350** is available in 150cm and 300cm wide rolls in black, white, green and grey.

**"Saving the planet, one tarp at a time"**
